

## **Drake 7-Line - Rubber-Bushing**

My TR-7 had a very bad rubber-bushing in the PTO-gear. Looking for a substitution, i found that the hose for a washing machine fits perfectly! It has a diameter of  $\frac{3}{4}$ " and can easily be cut to the required length by using a very sharp knife, a rod (aluminum, 10mm) and a drilling machine. Slide a short piece of the hose over the rod, fix it in the machine, let it turn with high speed and hold the knife (look for the direction of the rotation!) for the required length against it. The pictures are self-explanatory:

**This hose fits to the TR-7, R-7 and RV-7, but NOT to the C-Line!!!**
